

**Accu-Slide**, the amazing new slide-out from BAL, is so ingeniously designed, yet so amazingly simple, you're likely to say it works like magic. A revolutionary, lightweight, heavy-duty system, Accu-Slide increases the quality and customer-appeal of RVs through superior performance and increased design flexibility. Yet, it's cost-efficient to install.

EXPANDABLE ROOM SYSTEM

# ACCUSLIDE

## A LEADING-EDGE, "WHY DIDN'T I THINK OF THAT?" CONCEPT

### Greater design flexibility, for added customer satisfaction.

Accu-Slide is a patented slide-out system designed as a frame within a frame, with the slide-out action controlled by BAL's innovative power jamb technology. The outside frame fits snugly into the precut wall of the RV, and the slide-out room fits into the inside frame. When the power switch is activated, the system's stainless steel cables glide the room precisely in or out. So Accu-Slide gives you unprecedented freedom to build RVs with customer-pleasing slide-outs.

**Any size.** Accu-Slide, in its multiple sizes, is ideal for motor homes, travel trailers and fifth wheels.

**Any application.** The system has no mechanical devices, hydraulics, rods or stabilizers above, beside or below the unit. So Accu-Slide can be placed in any location in the coach — including above wheel wells, above the basement, or even one slide-out above the other. And you can easily run wires and ductwork beneath the slide-out.

**Opens wide.** Accu-Slide can open as deep as 60 inches, providing great flexibility in floor plan design, plus extra living space for RVers.

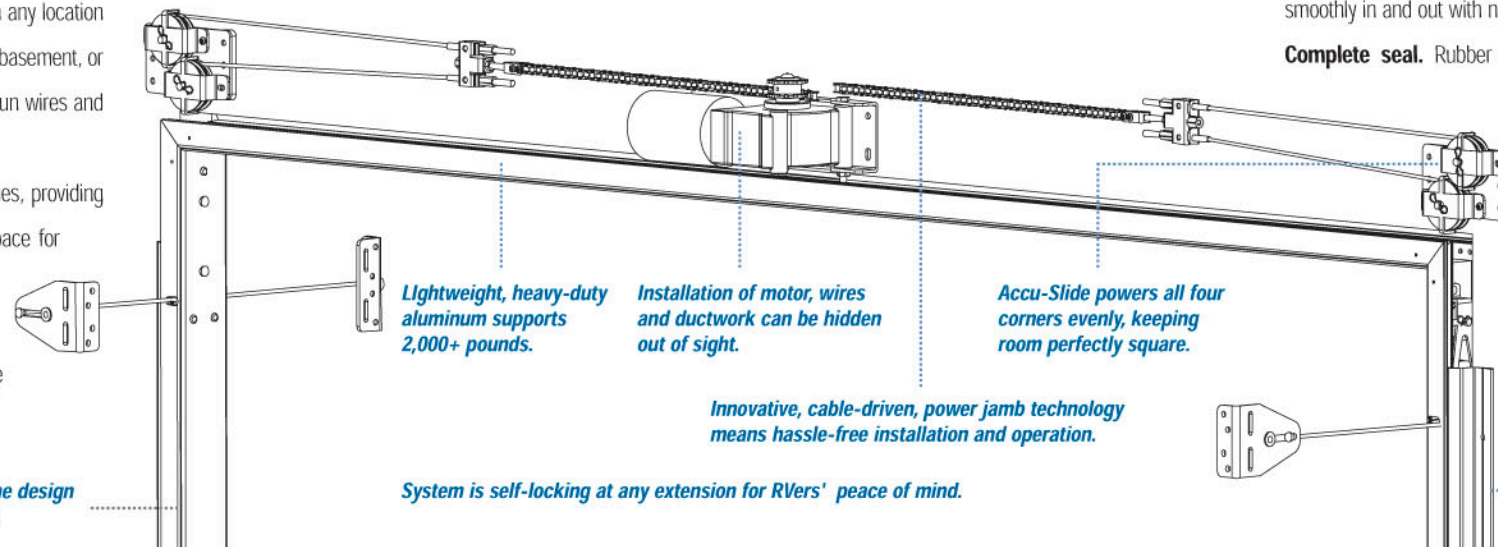

**Hassle-free power requirements.** The slide-out runs off the RV DC power, making installation and usage easy.

*The exclusive, frame-within-a-frame design allows multi-level room placement.*

## EASY, COST-EFFICIENT INSTALLATION

### Potential for bigger profits.

Units are shipped with all the parts intact and ready to be installed: interior and exterior frames with electric motor, rubber wipes, bottom rollers and cable system attached. The frame can be installed into the precut space in less than 15 minutes, and the slide-out room can be installed in another 15 minutes. Due to its advanced concept, its limited number of parts and the simplicity of design, there is little to go wrong with the system on the line. No hydraulics or pumps to double check. Just an ingenious cable system. With its faster, trouble-free installation, flexibility of usage and increased customer appeal, Accu-Slide will prove a better value than old-style slide-outs. This translates into a greater value for you.

## SUPERIOR QUALITY

### Accu-Slide helps you build a better RV, beefing up your bottom line.

Think of the incredible work done by advanced design cable systems. High-rise elevators with their tremendous weight capacity. Fighter jets with their high-precision fly-by-wire technology. Accu-Slide is in the same league. It's far superior to competing slide-outs.

**Heavy-duty.** Each stainless steel support cable has a tensile strength of more than 2,000 lbs. That's strong enough to support the heaviest slide-outs.

**Light-weight.** The entire mechanism weighs less than 40 lbs. So you can include extra features on the coach. And RVers can take along extra cargo — plus save on fuel.

**Smooth, even operation.** Tension is applied evenly at all four corners so the slide-out glides smoothly in and out with no glitches.

**Complete seal.** Rubber wipes prevent debris from entering unit, and precision actuation guides your bulb seals to close tightly. So Accu-Slide helps ensure a complete seal.

**Security while vehicle is in motion.** Motor design puts tension on the cables and keeps Accu-Slide in place at all times. The slide-out cannot accidentally move when it's fully retracted, and no prop bars are needed to keep the slide-out in place.
