

CABLE SLIDE SILL MATERIAL **BRAND:** BAL EXACT SLIDE G5.5 **CREATED DATE:** 06/14/2024

ID NUMBER: SQS.EXT.002 **TYPE:** Exact Slide **REVISION:**

Above Floor Sill Support	<p>Above Floor slides require a cleat to be mounted 1/8" above the entire length of the rough opening to support the interior of the sill material.</p>	
---------------------------------	---	--

Opt 1: Water Dam	<p> This is the least effective water management method and is not recommended by most OEMs.</p> <p>Process: Build a water dam at the edge of the sill material to divert the water away from the interior.</p>	
-------------------------	--	--

Opt 2: Cut and Fold	<ol style="list-style-type: none"> 1. Cut the sill material 3-4 inches from the edge, leaving the back lip of the material. 2. Remove the front lower lip. 3. Fold the sill material to create a corner. 4. Seal all edges [each area where there is a join in material]. 	<p style="text-align: center;">Optional Cut and Fold Method</p>
----------------------------	---	--

Opt 3: Drip Cup	<ol style="list-style-type: none"> 1. Seal the top edge of the corner cup to the rough opening. 2. Seal the sill material to the corner cup.
